

# TRACK IDENTIFICATION MARKERS

IMPACT RESISTANT & TRIP SAFE

Made with a poly-urethane joint that can bend over 180 degrees and return to an upright position. These durable signs can withstand impact from boots and air hoses and remain mounted to your ties for years in the harshest conditions.

## INFORM FROM BOTH DIRECTIONS

All markers are double-sided and can have custom colors and information on both sides. One track sign can tell inbound crews the track number, while the opposite side indicates that its the Clearance Point for shoving out onto the main track.

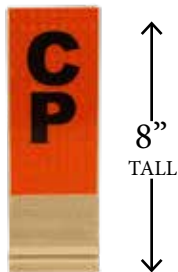

FACING POINT FROM MAIN

SHOVING TOWARDS MAIN

## 8" TALL CLEARANCE POINT MARKERS

## MADE FOR DAY & NIGHT OPS

Over twice as reflective as standard clearance cones and track signage. Guaranteed to be reflective with prismatic reflectivity for over 10 years in the field.
